1. <u>INTRODUCTION</u>

This Optician Shop Management system using php was designed to manage the optician information such to produce optical important information Business is one of the most important economy generators for each country and since the dawn of the twentieth century, all business companies turned to technology to better improve their business chances and qualities. Thus, such is reasons of the developed for the optical business, where it will be implemented in each of the shop outlet of an optical company. The system name is Optical Shop Management(OSM). The system is developed for the purpose of making management much more systematic, secure and efficient OSM consist of modules which are login, transaction management and financial management.

Main feature you can add customer details who want to buy your product you can modify or edit customer details you can your Add Product details, spectacles details, sunglass, Computer glass also you can edit product details use sale product from for sale information and generate bill .You can also print receipt. generate report for customer, product and sales.

Optical Shop Management project is implemented in PHP language. For database MYSQL has been used. There also we used HTML and CSS. This is an online shopping project for purchasing optical glasses, frames and others eye wears. In this project have 2 module firstly here admin can login, after than login admin can details with delete option. You can also delete the through frame of the deletion option admin can view booked frame by user. In this Optical shop management project application user can register account and then can fill a login form after that user can see different types of frames and consult with your problem and book frame with online payment.
